List of projects that I built at the TSC

- Built multiple 3 page sites that would take a users information and image and store it in a database
- Built a tool that allowed internal users to make changes to customers information if needed
- Built a location tracker that allowed users to scan an item and it tells them where it goes
- Built a hub that allowed internal users to access all of the tools for a client and they can make the necessary changes or download information that was needed.
